

		DEPARTMENT OF INFORMATION TECHNOLOGY	
		FACULTY OF COMPUTING	
MODULE OUTLINE			
Module Name	Modern Enterprise Management		
Module Code	IT3120	Version No.	2026-1
Year/Level	3	Semester	1
Credit Points	4 Credits		
Pre-requisites	None		
Co-requisites	None		
Methods of Delivery	Lectures	2 Hours/Week	
	Tutorials	1 Hours/Week	
	Workshops	2 Hours/Week	
Courseweb Site	http://courseweb.sliit.lk		
Date of Original Approval	June, 2024		
Date of Last Approval	June, 2026		
Date of Next Review	June, 2031		
MODULE DESCRIPTION			
Aim	This unit provides a broad introduction to the application of management principles in IT projects and operations. The unit introduces the management principles and skills needed for IT professionals to work in or manage IT projects and explore how organizations operate and the management within an organization. This unit also covers the key tools of project management, including planning, estimating, scheduling, budgeting, and resource allocation, team management. In addition, this unit also introduces the management and legal aspects related to entrepreneurship. This unit, in line with current industry practices, supports increased confidence and serves as a bridge between technical students and the real business world.		
Learning Outcomes	At the end of the module, the student will be able to:		
	LO1:	Explain the key organizational functions within IT businesses or Units	
	LO2:	Apply basic concepts of management to successfully manage IT organizations	
	LO3:	Explain the process and requirements of developing a new IT business organization	
	LO4:	Apply principles and tools of project management to the industrial environment	
	LO5:	Evaluate legal and ethical aspects of IT businesses and projects	
	Assessment Description:		
	During the semester there will be a mid-term examination, Assignments and a Final Examination. The distribution of marks for the assessment components are as follows;		
	Assessment Activities:		

Assessment
Criteria

	Assignment	30%	LO4 - LO5
	Midterm	20%	LO1, LO2
	Final Exam	50%	LO1 - LO5
	Total	100%	
Estimated Student Workload	Contact Hours		
	Lectures + Tutorials	45 Hours	
	Workshops	30 Hours	
	Time Allocated for Assessments		
	Assignment	32 Hours	
	Midterm	1 Hours	
	Final Exam	2 Hours	
	Reading and Independent Study	90 Hours	
	Total	200 Hours	
Module Pass Requirements	To pass this module, students need to obtain a 50% in both “Continuous Assessments” and “End of the Semester Examination” components which would result in an overall mark that would qualify for a “C” grade or above

CONTENTS OF THE MODULE

1.	Introduction to Management Concepts (6 hrs)	LO1, LO2
	a. Management Approaches b. Organizational Structure c. Concept of Power d. Motivational Strategies	
2.	Introduction to Marketing (4 hrs)	LO1, LO2
	a. Marketing strategy, market research, product management b. Digital marketing c. Brand management d. Customer relationship management	
3.	Introduction to Economics (4 hrs)	LO1, LO2
	a. Demand and Supply b. Cost of production c. Macro Economics	
4.	Introduction to Human Resource Management (4 hrs)	LO1, LO2
	a. HR Recruitment, Performance Rewards b. Leadership, Negotiation, Power c. Project Teams, Motivation and Personality	

5.	Introduction to Finance Accounting (3 hrs)	LO1, LO2
	a. Balance sheet b. Profit and loss c. Cash flows and ratios	
6.	Entrepreneurship for ICT professionals (6 hrs)	LO3
	a. Process of entrepreneurship in SL b. Opportunities Challenges c. Success stories	
7.	Legal and ethical Issues in IT-Businesses (3 hrs)	LO5, LO5
	a. Legal issues related to IT professionals (IP, agreements) b. Ethical issues related to IT professionals c. Best practices	
8.	Project Management - PM Lifecycle PM Process groups (3 hrs)	LO4
	a. PM Lifecycle Process groups	
9.	Project Management - Stakeholder Communication management (3 hrs)	LO4
	a. Activities, Tools, Techniques, Inputs and Outputs related to Stakeholder Management b. Activities, Tools, Techniques, Inputs and Outputs related to Communication Management	
10.	Project Management - Cost, Scope management (3 hrs)	LO4
	a. Activities, Tools, Techniques, Inputs and Outputs related to project Cost Management b. Activities, Tools, Techniques, Inputs and Outputs related to project Scope Management	
11.	Project Management - Procurement, Resources Schedule management (3 hrs)	LO4
	a. Activities, Tools, Techniques, Inputs and Outputs related to Procurement Management b. Activities, Tools, Techniques, Inputs and Outputs related to Resources Management c. Activities, Tools, Techniques, Inputs and Outputs related to Procurement Management	
12.	Project Management - Risk, Quality Integration management (3 hrs)	LO4
	a. Activities, Tools, Techniques, Inputs and Outputs related to Risk Management b. Activities, Tools, Techniques, Inputs and Outputs related to Quality Management c. Activities, Tools, Techniques, Inputs and Outputs related to Integration Management

Module	H			L	L	M		M			H		
PO1	Apply knowledge of mathematics, statistics, basic sciences, and computer science to solve complex problems related to the computing domain.												
PO2	Identify, formulate, and analyze complex problems related to the computing domain by using established approaches in computing while recognizing their limitations, reviewing technical literature, and interpreting the results of experiments designed using appropriate research methods.												
PO3	Design systems, processes, or services to meet desired needs within realistic constraints.												
PO4	Apply reasoning informed by contextual knowledge in the area of information technology to assess the impacts of IT solutions in a global, economic, environmental, societal, legal, cultural, and health and safety context.												
PO5	Design, implement and deploy IT solutions using industry best practices including continuous improvements, quality assurance and mitigating security risks.												
PO6	Create, select, and apply appropriate computing tools, techniques and resources necessary to solve IT related real world problems												
PO7	Apply broad knowledge of sustainable development concepts and practices required for developing a solution in the information technology domain.												
PO8	Apply ethical principles and commit to professional ethics, responsibilities, and norms in the field of Computing												
PO9	Function effectively within a multidisciplinary and multicultural team which promotes equality, diversity, and inclusion.												
PO10	Communicate on computing activities with a wide variety of audiences by means of appropriate designs, plans, reports, presentations, and instructions.												
PO11	Apply broad knowledge of management principles, commercial context, change management, relevant legal matters including intellectual property rights and risk mitigation to manage projects in a multidisciplinary context.												
PO12	Plan and record self-learning and continuous professional development as the foundation for lifelong learning.												
GENERAL INFORMATION													
Any type of plagiarism is not allowed.													
Plagiarism: Academic honesty is crucial to a student's credibility and self-esteem, and ultimately reflects the values and morals of the Institute as whole. A student may work together with one or a group of students discussing assignment content, identifying relevant references, and debating issues relevant to the subject. Plagiarism occurs when the work of another person, or persons, is used and presented as one's own.
